Inspection Defect Log			
Defect #	Description	Severity	How Corrected
1	HTML file for gamepage doesn't follow standard for site (no navbar) and basic attempts to rewrite fail	Medium	Likely will require rewriting how the game is displayed. Possibly switch to using Chessboard.js
2	Server hard coded to execute on port 8080	Low	Allow owner to specify which port they are using
3	Moves that put you in check are still highlighted	Medium	Test for Check before highlighting
4	Seeing if a move puts the player into checkmate mimics action by moving piece to see if it takes the king then moves it back. Can cause very strange bugs	Medium	Rewrite code to just check if its an available move for the piece
