

Defect Number	Defect Description	Defect Severity (1 being least severe, 5 being most)	Description of test/Test Number
1	Logging in multiple times with the same user sometimes goes to the correct page (repo page) and sometimes goes to a blank page	2	Open up multiple tabs in a browser (I used 11) and go to the website. Log in on each tab.
2	Logging in on different days would yield different results on if the website would work or not.	5	Backend is unreliable, website would be hosted fine one day and would be not hosted the next
3	Logging out needs to be done through the URL, and logging out does not really log out your credentials unless you log out of GitHub.	4	18/19
4	Error message for an incorrect format of a repo when trying to add it doesn't change/refresh when you add two repos that have not been correctly formatted one after the other (This makes it difficult to tell if anything happened or not)	1	5, twice in a row using different repos
